E-Recycling Solutions

A major worldwide problem is the disposal of obsolete electrical equipment, such as computers, military electronics, telecommunication devices, and medical equipment. The corporate challenge is to cost-effectively disassemble re-usable parts, to reduce and separate the remaining electronic components, and to profitably recover the base and precious metals as well as other recyclables.

*Recovery of precious metals
From electronic hardware can be
more lucrative and cost effective
than mining the metals!*

Benefits For The Recycler:

- Access to a source of precious and base metals with high purity levels without the need for huge capital investments associated with new mines
- Controlled and consistent access to a supply of high quality precious and base metals
- Enhanced image as a major recycler of outdated post consumer products
